## RURAL BALKANS AND EU INTEGRATION

### An Input-Output Approach

edited by  
**Andrea Bonfiglio**  
**Roberto Esposti**  
**Franco Sotte**

The book focuses on the development perspectives of rural regions in 5 Balkan countries: Bulgaria, Croatia, Greece, Romania and Slovenia. Its main objective is to assess the implications for inter-sectoral rural employment patterns of policy changes at domestic and EU levels. The study identifies five rural regions (one for each country) as case studies. Input-Output (I-O) analysis is carried out on the selected regions to study in detail the structure of rural employment and to assess policy impact. Policy impact analysis is achieved through the definition of policy scenarios taking into account EU accession status, EU policies and other specific regional policies. The impact of the different scenarios on regional non-agricultural and agricultural output, employment and income is evaluated including those within the regional I-O models.

*Andrea Bonfiglio* is researcher in the Department of Economics, Università Politecnica delle Marche – Ancona (Italy).

*Roberto Esposti* is senior researcher in the Department of Economics, Università Politecnica delle Marche – Ancona (Italy).

*Franco Sotte* is full professor in the Department of Economics, Università Politecnica delle Marche – Ancona (Italy).
